[Show No Impact Audits ▼](#)

What do these audits mean?

These audits are best practices established by Google to help build websites for optimal front-end performance.

Each audit is assessed based on your adherence to them and ordered by the most likely impact to your page's performance.

Note that Structure audits do not directly affect your Performance score, however addressing them can serve as good starting point to improve page load times overall. Additionally, some of the audits are correlated and thus, fixing one audit may affect others.

Top Issues

These audits are identified as the top issues impacting your performance

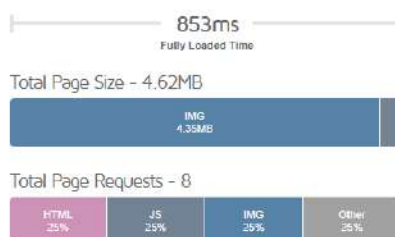

All FCP LCP TBT CLS

High	Avoid enormous network payloads ^{LCP}	▼
Med-Low	Use explicit width and height on image elements ^{CLS}	▼
Med-Low	Serve static assets with an efficient cache policy	▼
Low	Properly size images	▼
Low	Defer offscreen images	▼

Improving these audits seen here can help as a starting point for overall performance gains.
[See all Structure audits.](#)

Page Details [?]

Pages with smaller total sizes and fewer requests tend to load faster.

Look into reducing JavaScript, reducing web-fonts, and image optimization to ensure a lightweight and streamlined website.
